

Teacher Guide

Gotta Fetch 'Em All · Sunday 3:30 to 5:30 · Victor, Bryan, Jake (all on Windows)
Aasees Sethi · Caution Tape

The one goal: by 5:30 every kid has a game running on their laptop and a **poke-arena** repo on GitHub, and you have all 3 links. If time gets tight, protect setup and the GitHub push over everything else.

The plan at a glance

3:30	Setup check	10 min
3:40	Play the POKÉ ARENA demo	15 min
3:55	Catch + Mewtwo cheat	10 min
4:05	Fetch PokéAPI, diagram, stat mapper	15 min
4:20	Quiz 1	5 min
4:25	Break	5 min
4:30	Set up tools	25 min
4:55	Quiz 2	3 min
4:58	PRD #5 (mine, then theirs)	12 min
5:10	Codex prompt + play and check	10 min
5:20	Push to GitHub + link wall	5 min
5:25	Fetch Tower + homework	5 min
5:28	Quiz 3 if time, else Week 3 warm-up	2 min

How to run each idea

They **do or guess** first, then **run it**, then **explore**, then you **name it** in one sentence. Never explain before they've touched it. On build steps, **you go first on Power Trail**, then stop and help. Never keep building while someone is stuck.

Slide shortcuts

→ / Space	Next (← back)	S	Scoreboard
F	Fullscreen	T	Timer menu
E	Error fixer, any slide	H	Help
Esc	Close popups		

Before class

By Friday night

- ☐ Send the families the setup message below.
- ☐ Test the slides on your laptop: open the file, press F, click through every slide once.
- ☐ Fetch Tower works start to finish at fetch-tower.vercel.app, including the Pokédex.

Hi! This is Aasees, the Lab 3 coach. This Sunday we start building our Pokémon game, and setup took a big chunk of our first class, so a head start at home would really help. Could you help your kid with these before Sunday?

1. Install Node.js (the LTS version) from nodejs.org
2. Install Git from git-scm.com (the default options are fine)
3. Make sure VS Code opens and the Codex panel is signed in
4. Make a free account at vercel.com using "Continue with GitHub"

If anything gets stuck, no worries, just bring the laptop and we'll sort it out in class. Thanks!

Saturday: Power Trail

- ☐ Build Power Trail fully at home with the same steps the kids use (Vite, Phaser 3, PRD, the Codex prompt on slide 26).
- ☐ Save that finished version on a branch called `finished`.
- ☐ Make a fresh copy for class: Vite and `phaser@3` installed, PRD.md NOT written yet, nothing built. You build it live.
- ☐ If the live build breaks on Sunday, switch to the `finished` branch and keep going. Slide 27 also has a working mini version built in.

Sunday, before 3:30

- ☐ Test the slides on the classroom wifi: the PokéAPI explorer (slide 10) should say 'live from PokéAPI'. If it says 'backup copy', the wifi is down but the slides still work.
- ☐ Check the demo and Fetch Tower load inside slides 4 and 33. If they don't, use the 'Open' buttons in the corner.
- ☐ Laptop charged, projector adapter, charger.
- ☐ Open this guide on your laptop or print it.
- ☐ Scoreboard reset to 0 (press S, click ↺).
- ☐ Scores, votes, ticks, PRD boxes and GitHub links save in the browser, so use the same laptop and browser all class. Slide numbers in this guide match the bottom right of each slide.

Rattata (#19): hp 30, attack 56, speed 72. **Pidgey (#16):** 251 power. **Caterpie** 195, **Weedle** 195, **Rattata** 253, **Spearow** 262. Beat all four in Power Trail and you end at 1156.

Slide by slide

1

Title: Gotta Fetch 'Em All

PLAY

3:30

SAY

Alright guys, new project today. For the next 6 weeks you're building your own Pokémon game.

By the time you leave today, it's running on your laptop and it's on GitHub. That's the deal.

DO

- Have the slides fullscreen (F). Scoreboard hidden for now.
- Make sure all 3 laptops are open and charging.

DONE WHEN

Everyone's sitting with a laptop open.

IF YOU'RE LATE

Never cut. It's 30 seconds.

2

Today's map

PLAY

3:31

SAY

Here's today. Play, Fetch, Setup, Build, Ship.

The finish line is your GitHub link on the wall. Nobody leaves without it, okay?

Points all day for being first and getting stuff right. Winner gets bragging rights.

DO

- Point at each stop. Press S to show the scoreboard (a strip at the top) so they see it exists, then S again to hide it.

DONE WHEN

They know there's a finish line and points.

IF YOU'RE LATE

Skip the points talk if you're late.

3

Pit stop: setup check

PLAY

3:32 to 3:40

SAY

Before we do anything fun, I need to know your laptop is ready. Last time setup ate the whole class. Not today.

Open VS Code. Is the Codex panel there on the right? Victor, yours?

Now Terminal, New Terminal. Type `node --version`. What does it say? Then `git --version`.

First one with 4 green ticks is my assistant. You help whoever's stuck.

DO

- Click each box as they confirm: once for ✓, twice for SOS.
- Walk to each screen and actually look. Don't trust 'yeah it works'.
- Anyone with SOS on Node or Git: start the install now (nodejs.org LTS, git-scm.com) so it downloads while they play.

DONE WHEN

Every kid has Node v22+ and Git, or an install is running.

IF YOU'RE LATE

Don't cut. If someone needs an install, let it run in the background during Mission 1.

WINDOWS WATCH-OUTS

- 'node is not recognized' after installing: close VS Code completely and reopen.
- No Codex panel: Ctrl+Shift+P, type Codex: Open Codex Sidebar. No sign-in? They pair with a neighbour today.
- Press E any time for the error fixer.

4 Mission 1: play the demo

PLAY

3:40 to 3:55

SAY

Mission 1. This is the game you're building a version of. Play it.

WASD to move, your Pokémon fights by itself. Pick up the blue orbs. When you level up, pick a card.

Longest survival wins 3 points. Remember your time. 15 minutes, then laptops close. For real this time.

DO

- Click Start 15:00. The timer shows on every slide.
- If the demo doesn't load inside the slide, click 'Not loading? Open demo' and they open demo-poke.ct839.dev on their own laptops anyway.
- Walk around. Help with controls.

DONE WHEN

Everyone has played at least one full run and seen a results screen.

IF YOU'RE LATE

Cut to 10 minutes if setup check ran over. The game is built to eat a class. Do not let it run past the timer.

WINDOWS WATCH-OUTS

- Demo takes about 10 seconds to load the first time. Tell them to wait.
- 'Pick a partner' means pick your starter Pokémon.

5 Who survived longest?

PLAY

3:55

SAY

Okay, laptops half closed. Times?

Jake, how long did you last? Bryan? Victor?

DO

- Type each time into their box (like 4:12). Click 'Crown the winner'. It adds 3 points and throws confetti.

DONE WHEN

Winner crowned, laptops half closed.

IF YOU'RE LATE

Skip the slide and just shout out the winner.

6 Mission 2: catch one

PLAY
3:56 to 4:00
SAY

Now catch something. Hit a Pokémon until it gets a pulsing ring. Then press C.

Careful. You get ONE throw per Pokémon. Miss and it's gone.

Once it says GOTCHA, it's on your team. Press 1, 2, 3 to swap your lead.

DO

- Let them do it. Check each screen for a GOTCHA.
- Read the bottom line out loud: what if we just TOLD the game we caught something?

DONE WHEN

Everyone caught at least one Pokémon.

IF YOU'RE LATE

If nobody's catching after 3 minutes, move on. The cheat matters more.

7 Mission 3: the cheat

PLAY
4:00
SAY

Catching Mewtwo is hard. So let's cheat.

Stay inside a run. Press F12 and click Console. Some laptops need Fn plus F12.

Type this exactly: await arena.cheats.catchMewtwo()

If Chrome won't let you paste, type allow pasting first and press Enter.

What did it say?

DO

- Show it on the projector first: click 'Type it for me'. The fake console prints SERVER REFUSED 403.
- Then they do it for real in the demo. Check that each kid sees the red 403.

DONE WHEN

All 3 have seen SERVER REFUSED 403 on their own screen.

IF YOU'RE LATE

Never cut. This is the hook for the whole project.

WINDOWS WATCH-OUTS

- F12 does nothing: try Fn+F12, or right click the page and pick Inspect.
- 'arena is not defined': they're on the title screen. Start a run first.
- They forgot await: they'll see a Promise first, then the refusal. Still counts.

8 Who said no?

PLAY 4:03

SAY

You told the game you caught Mewtwo. Something said no. Who?

Victor, what do you think? Your laptop, the game's server, or Chrome? Bryan? Jake?

I'm not telling you. You find out in Week 5. Remember your guess.

DO

- Click a bubble for each kid's vote. The counts stay saved.
- Do NOT explain how the server knows. That's the course rule.

DONE WHEN

3 votes in, nobody knows the answer yet.

IF YOU'RE LATE

Take votes out loud in 20 seconds.

9 Where did 35 HP come from?

FETCH 4:05

SAY

Here's a question. The demo knows Pikachu has 35 HP. Where did that number come from?

Someone typed it in? It's in the game files? Or it asked another website?

Lock it in. Let's find out.

DO

- Click their votes. Don't reveal anything. The next slide is the reveal.

DONE WHEN

Everyone has a guess.

IF YOU'RE LATE

Ask the question out loud and go straight to the next slide.

10 Ask PokéAPI (live explorer)

FETCH 4:06 to 4:11

SAY

It asked a website called PokéAPI. Watch.

This line goes to that address and asks for Pikachu. That's it.

See the answer? Click the arrows to open stuff. Where's the HP? Bryan, find it.

Now you do it. Same line, in YOUR Console on the demo tab. Then change pikachu to anything you want.

DO

- Click fetch!, then 'find hp', then 'find picture'. The row lights up.
- Type a kid's favourite Pokémon in the box and fetch it live.
- Tick the Power box once to show all 6 stats added up (Pikachu is 320). That sets up your game later.
- Then they paste the fetch line into their own Console (Copy button on the black box).

DONE WHEN

Each kid has a Pokémon object open in their own Console and found hp.

IF YOU'RE LATE

Do the explorer yourself, skip the kids doing it, and go straight to the race (the race makes them do it anyway).

WINDOWS WATCH-OUTS

- Chrome blocks the paste: type allow pasting first.
- Run it on the demo tab, not a blank tab or a school portal page.

11 Console race

FETCH

4:11 to 4:14

SAY

Race time. I show a challenge, you find it in YOUR Console. First to shout the right answer gets a point.

Ready? Go.

DO

- Click Go! to start the stopwatch. When someone shouts, click 'Reveal answer' to check, then click their name for +1.
- Click Next for the next challenge. 3 or 4 challenges is plenty.

DONE WHEN

Everyone has fetched at least 2 different Pokémon on their own.

IF YOU'RE LATE

Do 2 challenges instead of 6.

12 Name it: API, fetch, JSON

FETCH

4:14

SAY

You just did 3 things. Now they get names.

PokéAPI is an API: a website made for programs, not people.

fetch sends a request to an address.

What came back is JSON: labels and values. hp, 35.

Then the game turns those numbers into HP, damage and speed.

DO

- Click Play. The packet goes out, the JSON comes back, the bars fill. Click it again if they want to see it twice.
- Ask Jake: so where did the 35 come from? You want: it fetched it from PokéAPI.

DONE WHEN

One kid can explain the trip in their own words.

IF YOU'RE LATE

Read the 3 cards and play the animation once.

13 Why limit speed? (stat mapper)

FETCH

4:16 to 4:20

SAY

Electrode has speed 150. Slowpoke has 15. That's 10 times faster.

Watch with limits on. Now I turn them off. Race again.

Would you play that game? That's why the demo caps the numbers.

DO

- Click Race with Limits ON. Untick Limits ON, race again. Electrode zooms off, Slowpoke barely moves.
- Let a kid pick two Pokémon from the dropdowns and race them.

DONE WHEN

They can say why games put limits on raw stats.

IF YOU'RE LATE

One race with limits off is enough.

14 Quiz 1

FETCH

4:20 to 4:25

SAY

Quiz time. 4 questions, 20 seconds each. Shout or point, I'll click.

DO

- Click Start 20s, read the question, wait for answers, click the answer they pick.
- After the reveal, click the names of everyone who got it right (+1 each). Next question.

DONE WHEN

4 questions done, points on the board.

IF YOU'RE LATE

Do 2 questions. The other 2 come back as Week 3 warm-up.

15 Break

FETCH

4:25 to 4:30

SAY

5 minutes. Water, bathroom. Back at 4:30.

DO

- Click Start 5:00.
- Use the break: check anyone's Node or Git install from the setup check.

DONE WHEN

Back in seats at 4:30.

IF YOU'RE LATE

If you're very behind, make it 3 minutes.

16 Build the empty house (terminal sim)

SETUP 4:30 to 4:33

SAY

Now we install the real tools. It's a bit boring. Every real developer does this once. Let's get it done.

Here's what your terminal is going to say. Watch, then you do it.

DO

- Click each command in order. Read the little bubble out loud as it types.
- Then click the 3 'common mistakes' at the bottom so they recognize them: the Vite menu, Phaser 4, and Windows blocking scripts.

DONE WHEN

They've seen every command once and know what a mistake looks like.

IF YOU'RE LATE

Click through just mkdir, the vite command and phaser@3.

17 Your turn: commands

SETUP 4:33 to 4:48

SAY

Your turn. One line at a time. Wait for each one to finish.

Use the Copy buttons. Don't type the long one by hand.

When you're done, File, Open Folder, C:\dev\poke-arena. Your terminal closes. That's normal. Open a new one.

Then open package.json. What does phaser say? It better start with 3.

DO

- Click 20:00 if you want a visible clock.
- Sit next to whoever is slowest. Assistant from the setup check helps the next slowest.
- Check package.json on every laptop yourself.

DONE WHEN

Every laptop has C:\dev\poke-arena with phaser ^3 in package.json.

IF YOU'RE LATE

Don't cut. If someone is hopelessly stuck, they pair with a neighbour for the build and fix their laptop at home.

WINDOWS WATCH-OUTS

- Use C:\dev, never Documents. Documents is usually OneDrive, and OneDrive chokes on node_modules.
- A framework menu appeared: they dropped the --. Ctrl+C, run it again.
- Vite asks an extra question: pick the default.
- '^4' in package.json: run npm install phaser@3 again.
- 'running scripts is disabled': press E, first error. Set-ExecutionPolicy -Scope CurrentUser RemoteSigned, then Y, then new terminal.

18 Error fixer

SETUP Any time

SAY

Red text? Don't panic. Which one do you see?

DO

- Click the matching button. It shows the fix with a Copy button.
- You can open this from any slide with E.

DONE WHEN

Error gone.

IF YOU'RE LATE

Only open it when someone needs it.

WINDOWS WATCH-OUTS

- All the Windows fixes live here.

19 Last tool: Vercel

SETUP 4:45 to 4:52

SAY

Last tool. Vercel puts your game online. Next week it runs your own server too, so we need it working.

No account? Pick Continue with GitHub. One login for both.

If the first line gives you a red error, skip it. Just type `npx vercel` instead of `vercel`. Same thing.

DO

- Make sure each kid sees 'logged in' in the terminal.
- Write down anyone using `npx vercel`. They use `npx` all term.

DONE WHEN

`vercel --version` prints a number and `vercel login` says they're logged in.

IF YOU'RE LATE

If login drags, do it at the end of class or at home. Week 3 needs it, today's game doesn't.

WINDOWS WATCH-OUTS

- 'running scripts is disabled' on vercel: Set-ExecutionPolicy fix, or just `npx vercel`.
- Permission error on `npm install -g`: skip it, use `npx vercel`.
- Signing up with email means waiting for a confirmation email. Push them to GitHub login.

20 Setup finish line

SETUP 4:52 to 4:55

SAY

Everybody across? Show me. Folder, phaser 3, vercel version, vercel login.

DO

- Click ticks as you check each laptop. SOS for anything missing.
- Anyone with SOS on vercel login: it becomes homework item 4.

DONE WHEN

Folder and phaser ^3 are green for all 3.
Vercel can be SOS.

IF YOU'RE LATE

Check out loud instead of clicking.

21 Quiz 2**SETUP****4:55 to 4:58****SAY**

Quick quiz. 4 questions about setup.

DO

- Same as Quiz 1: Start 20s, click their answer, click names for points.

DONE WHEN

Done.

IF YOU'RE LATE

Do just the phaser@3 and C:\dev questions.

22 Meet Power Trail (my game)**BUILD****4:58 to 5:00****SAY**

Okay, I'm building a game too. Mine's called Power Trail.

Every Pokémon has a power number. You beat someone smaller, you eat their power. Pick someone bigger, you faint.

Power is just all 6 stats from PokéAPI added up. Pidgey: 40, 45, 40, 35, 35, 56. Add them up. Who's got it?

DO

- Let them guess the total first. Then click Add them up. It counts to 251.
- This is the same Power toggle from the explorer.

DONE WHEN

They know what your game is and that 251 came from the JSON.

IF YOU'RE LATE

Skip the guess and click Add.

23 True or false: does this line stop a cheater?**BUILD****5:00 to 5:01****SAY**

Your plan needs a 'Server decides' list: things a cheater should never control.

True or false: would this line stop a cheater? Victor, first one.

DO

- Read each line, they answer, click True or False for their answer. It shows if they're right.
- Push them toward catches, shinies and the score. That list becomes Weeks 5 and 6.

DONE WHEN

They can tell 'the server handles stuff' is false and 'the server decides if a catch works' is true.

IF YOU'RE LATE

Do 3 lines.

24 My PRD

BUILD

5:01 to 5:03

SAY

This is my plan. A PRD is the plan you hand to Codex. Without it, Codex builds a game. With it, it builds yours.

5 parts. One page. It's never graded.

Look at Server decides and Out of scope. Those are the two everyone skips. Don't skip them.

DO

- Open your power-trail folder on your laptop, create PRD.md, paste this in and save. Let them watch you do it.

DONE WHEN

They've seen a full PRD and you've saved yours.

IF YOU'RE LATE

Show it, don't type it. Paste.

25 Your PRD

BUILD

5:03 to 5:10

SAY

Your turn. New file in poke-arena called PRD.md. Same 5 parts. Use my plan as an example, not a copy.

Pick your starters by number. The numbers are at the bottom. Pikachu is 25.

Server decides: what would YOU fake if you were cheating?

DO

- Click 10:00. Type one kid's answers into the boxes on screen as an example. The preview builds live.
- Walk around. Read each kid's Server decides list out loud and say if it's strong.

DONE WHEN

Each kid has PRD.md saved with all 5 parts.

IF YOU'RE LATE

3 lines per section is fine. Short is better than unfinished.

WINDOWS WATCH-OUTS

- Ctrl+S to save. PRD.md should show in the file list.

26 One prompt, first game

BUILD 5:10 to 5:12

SAY

I go first. Here's my prompt. Then here's yours.

See the colours? Both prompts have the same parts: read the plan, which engine, which file, where the data comes from, what happens.

Paste yours into the Codex panel. Allow it to change files. Wait till it says done.

DO

- Hover each legend colour. Matching parts light up in both.
- Copy your prompt into Codex in your power-trail project and send it. Then they copy theirs (Copy button).

DONE WHEN

All 4 Codex panels are working on the prompt.

IF YOU'RE LATE

Skip the colour hover. Just send the prompts.

27 Power Trail: play and check

BUILD 5:12 to 5:14

SAY

While Codex builds yours, let's play mine.

Which one should I fight first? Caterpie, Weedle, Rattata or Spearow? Vote.

I'm going for Rattata. 253. I have 251. What happens?

Why did I lose? Okay. Caterpie: 251 plus 195 is 446. Now I can beat everyone.

DO

- Click their guess bubbles. Click Rattata on purpose so they see 'You fainted!'. It restarts by itself.
- Then click Caterpie, then the rest. Ends at 1156 with 'Trail clear!'.
- If your real Power Trail is running on your laptop, show that instead. This slide is the backup.

DONE WHEN

Someone can explain why Pidgey fainted and where 251 came from.

IF YOU'RE LATE

Do the Rattata faint only.

28 Your turn: play and check

BUILD 5:14 to 5:18

SAY

Codex done? Type npm run dev. Ctrl+click the localhost link.

localhost means this computer. Only you can see it.

A Rattata should come at you. Prove the HP is real. Fetch number 19 in your Console. Does the hp match?

Then read your PRD. Yes or no next to each line.

DO

- Check each screen for a moving Rattata with HP 30.
- Rattata is hp 30, speed 72.

DONE WHEN

A Rattata is chasing each kid and its HP matches the JSON.

IF YOU'RE LATE

Skip the PRD yes/no. Moving Rattata is the win.

WINDOWS WATCH-OUTS

- Blank page: F12, Console, paste the red error into Codex.
- Blank boxes instead of sprites: ask Codex to add `this.load.setCORS('anonymous')` before loading the sprite.
- Opens on 5174 instead of 5173: an old one is still running. That's fine, use the new address.

29 Cheat moment (my game)

BUILD 5:18

SAY

Here's a problem with my game. Right now anyone could open my Console and set their power to 99999. Because the browser decides everything.

Which line of my PRD is supposed to stop that? Bryan?

DO

- Let them guess, then click Reveal: Server decides #2.
- Then: how? That's Week 5. Leave it there.

DONE WHEN

They connect 'Server decides' to stopping cheaters.

IF YOU'RE LATE

Skip it if you're past 5:20.

30 Commit and push (git visualizer)

SHIP 5:20

SAY

Commit is a save point, like in a video game. It's only on your laptop.

Push sends your save points up to GitHub. Now they're safe in the cloud.

And node_modules? Too big. Anyone can npm install it again. So .gitignore blocks it.

DO

- Click Commit (a save card lands on the timeline). Click again for a second save.
- Click Push. The saves fly to GitHub, node_modules bounces off the .gitignore wall.

DONE WHEN

They can say the difference between commit and push.

IF YOU'RE LATE

One commit and one push. 30 seconds.

31 Push it

SHIP

5:21 to 5:24

SAY

I go first. Watch.

Ctrl+C to stop the game. Windows asks 'Terminate batch job?' Type Y.

Source Control on the left. Message: PRD #5 and first Pokémon. Commit. Publish to GitHub. Name it poke-arena. Public.

Open it on GitHub. PRD.md there? main.js there? node_modules NOT there? Good.

DO

- Push your own power-trail first on the projector with 'PRD #5 and first trail'.
- Then check each kid's GitHub page yourself.

DONE WHEN

3 poke-arena repos on GitHub with PRD.md and src/main.js, no node_modules.

IF YOU'RE LATE

Never cut. This is the goal of the class.

WINDOWS WATCH-OUTS

- No Publish button: Git isn't installed. git-scm.com, defaults, restart VS Code.
- VS Code asks to sign in to GitHub: let it, use the same account as Vercel.
- Commit button asks for name/email: VS Code usually handles it. If not, git config --global user.name and user.email.

32 GitHub link wall

SHIP

5:24

SAY

Links! Read me your repo link.

DO

- Type each link into their card and press Enter. The card goes green with confetti. Yours first.
- Links save in this browser, so they're still there next week. Click 'Copy all links' and paste them somewhere safe too.

DONE WHEN

4 green cards.

IF YOU'RE LATE

Never cut.

33 Fetch Tower sneak peek

SHIP

5:25 to 5:28

SAY

I made you a game. Fetch Tower. Every floor has a locked door, and the only way to open it is to do something from today.

You get 5 minutes. Try Floor 1. The rest is homework.

DO

- Click 5:00. If it doesn't load in the slide, click Open Fetch Tower and they open fetch-tower.vercel.app themselves.
- Don't give door answers. That's the point.

DONE WHEN

They've beaten Floor 1 or reached Door 1.

IF YOU'RE LATE

Show the screenshot and say 'homework'.

34 Homework

SHIP

5:28

SAY

Homework. 1, fill your Pokédex in Fetch Tower. You can't without opening the doors, and the doors check today's stuff.

2, swap Rattata for something way faster or slower and show its attack. 3, NOTES.md: what could go wrong with fetching straight from the browser? 4, make sure vercel login works.

Bonus: 3 changes of your own. Anything. Make it yours. One commit each. You show us next week.

DO

- Send the homework message (at the end of this guide) right after class.

DONE WHEN

They know what's due.

IF YOU'RE LATE

Say 'I'll send it to you' and move on.

35 Quiz 3

SHIP

5:28 if time

SAY

Last quiz. 4 questions.

DO

- Same as before. If it's 5:28 or later, skip it. It's the warm-up at the start of Week 3.

DONE WHEN

Done, or saved for next week.

IF YOU'RE LATE

Skip and do it as the Week 3 warm-up.

36 Next week

SHIP

5:29

SAY

Two things to think about on the way home. Your game asks PokéAPI straight from the browser. What could go wrong?

And which Server decides line would a cheater want most?

Next week: your own server in the middle. Bring your repo and your Vercel login.

IF YOU'RE LATE

Read the two questions and go.

37 **Final link wall**

SHIP

5:30

SAY

Last check. Everybody green? Nobody leaves without a green card.

DO

- Any card not green: that kid stays 2 minutes and you push together.
- Click Copy all links and save them.

DONE WHEN

4 green cards. Class done.

IF YOU'RE LATE

Never cut.

Answer keys

Quiz 1 (slide 14)

What did the server say to catchMewtwo()?	B. Refused: never in your run
What does fetch do?	A. Sends a request to an address
PokéAPI answers in which format?	D. JSON
Where is Pikachu's picture link in the JSON?	C. sprites.front_default

Quiz 2 (slide 21)

Why type npm install phaser@3, not just phaser?	C. Plain phaser installs version 4
True or False: a game should use raw stats exactly, with no limits.	B. False
Where should your project folder live on Windows?	B. C:\dev
What does npm install do?	B. Downloads the packages your project needs

Quiz 3 (slide 35)

Which belongs in "Server decides"?	D. Whether a catch works
At most, how many screens may PRD #5 have?	B. Three
What does push do?	B. Sends your commits up to GitHub
Power Trail: Pidgey (251) clicks Rattata (253). What happens?	B. Pidgey faints

Fetch Tower doors

Door 1: Rattata's HP	30
Door 2: the guardian's picture link	the link ending in /pokemon/19.png
Door 3: node --version	their own version, v22 or higher
Door 4: install the game engine	npm install phaser@3
Door 5: GitHub repo check	their GitHub username, with a poke-arena repo containing PRD.md

Don't hand these out. The doors have timed hints, so a kid who's really stuck gets walked through it without the answer.

Homework message (send right after class)

Hey guys, great work today! Here's your homework for next Sunday:

1. Fetch Tower (fetch-tower.vercel.app): fill your whole Pokédex. You'll have to open every door, and each one checks something we did today.
2. Swap Rattata for a Pokémon that's way faster or slower, and show its attack on screen. Push it.
3. Make a NOTES.md and answer this: my game gets data straight from PokéAPI in the browser. What could go wrong with that? Push it.
4. Make sure vercel login works on your laptop.

BONUS: make 3 changes of your own to your game. Anything you want: a new Pokémon, a background, faster movement, sound, a score. One commit for each change, with a message saying what you changed. You'll show us at the start of next class.

Stuck on anything? Message me. See you Sunday!

Week 3 opener

Start next class with each kid showing their 3 bonus changes for 1 minute each. Then run Quiz 3 if you skipped it, and check everyone's Fetch Tower floor. Week 3 needs the poke-arena repo, the Vercel CLI and the Vercel login. Anyone using `npx vercel` types `npx vercel` all class.

Class record

Student	GitHub link	Game running?	Pushed?	Vercel login?
Victor				
Bryan				
Jake				
Aasees (power-trail)
